

CFX-2

Variety Purpose: Grain/Fiber

Variety Type: Open Pollinated

Description

CFX-2 is a very popular variety used in organic systems in Canada and the US. The consistently uniform plant structure and excellent harvestability of CFX-2 are valuable traits recognized by both breeders and growers. Organic growers are especially drawn to this variety because of the superior vigour during establishment, tall stature that provides excellent weed control, and ability of the plant to scavenge nutrients when soil fertility is limited.

Applications

Growers operating on dryland systems in the southern part of Canada and mid to northern regions of the USA find that grain yields are strong thanks to a larger seed size and uniform plant structure.

CFX-2	
Origin	Canada
Seed Rate Grain	25-30 lbs/acre
Seed Rate Fiber	30-45 lbs/acre
Use	Grain/Fiber
Maturity (Canada – 50 degrees latitude)	~110+ days
CBD:THC Ratio	Between 10:1
Plant height (Canada - 50 degree latitude)	130-150cm
Female to Male (average)	60% female
Growth Habit	Medium
CBD Average %	0.5%-2.7%
Oil Content	32.1
Years of Data Collected	10

Key Characteristics

- Registered in 2015
- Medium-size seed, dioecious variety
- End uses: food and fiber
- High grain yielder
- Kernel weight: 16 grams/TKW seeds
- Soil requirements: well-drained soils of medium texture are ideal
- Time of flowering: ~50 days from planting
